

Phasure NOS1

and XXHighend Software Player

Phasure NOS1 USB Dac & XXHighend Software Player :: A Unique Relationship

Introducing a software player and dac designed to work together as one system, for a unique approach to computer playback that delivers unheard of sound quality from a pc. XXHighend is a bit-perfect memory player that allows high resolution playback and software upsampling to 768k/24bit, for truly natural, analog-like sound that rivals players many times the price. XXHighend plays well with all known dacs on the market, but sounds best when used with the Phasure NOS1 dac. With this system one can hear music as it was intended, smooth and analog-like, musical, transparent, yet far more detailed than anything you've ever heard.

XXHighend :: It's All About the Sound

XXHighend software player provides a seamless integration of multiple sample rates and music formats, converting all tracks into wav format before playback even starts. This lets the CPU focus on just one thing, bit-perfect playback. Play tracks of any sample rate natively to 768k/24 bits, or upsample any track to 768k/24 bits, using the world's first truly interpolating *Arc Prediction* filtering means. For best results, connect the Phasure Dac to your XXHighend pc for a more complete handshake with the PC and far greater control of playback parameters.

XXHighend ::

Minimizes Windows OS for Superior Sound

Playing music from a computer is easy. Making it sound live and musical is quite difficult due to the limitations of pc's. XXHighend offers a different approach, where the Windows OS is minimized, most devices and services shut off, allowing the proprietary audio engine to take over all cores of the cpu. This virtually eliminates jitter for analog-like sound that is smooth and about as live as it gets.

- All major formats enabled
- Native input resolution to 768k
- Software upsample to 24 bit/768k
- Adjustable memory buffer size, latency, and more
- Adjust many cpu parameters: choose detail or musicality
- Best sound ever, read the recent review from 6moons

XXHighend & Phasure NOS1 :: Risk-Free trial

Download XXHighend Player for free and begin to experience control over your computer like you've never seen, for a sound that is music to your ears. The Phasure NOS1 dac is also offered with a money-back guarantee, so you can purchase without worry. Log on and inquire about trialing both XXHighend player and the Phasure NOS1 USB Dac today.

NOS1 Features

XXHighend works with most audio converters, but makes amazing sound when connected with the Phasure NOS1. See our new review on 6moons.com for more info.

- Accepts up to 24/768K input
- Asynchronous USB
- Better than 0.2ps RMS jitter
- THD+N better than 0.0018% for CD
- THD+N better than 0.00043% for hi-res
- PCM1704U-K multibit D/A chips
- Ultra low output noise of 8µV
- Numerous input/output means optional
- Driver & Firmware auto-upgradable
- Best no-sounding DAC ever.
